

SAFE DIAL MECHANICS

TORONTO, ON

•

MAY 14 & 15TH
2018

This course is basically two courses in one. **Day 1** you will learn everything you need to know to install, dial, open, change the combination, diagnose and troubleshoot UL Group 2 mechanical combination locks. By the end of the day you will be able to completely disassemble and reassemble most mechanical dials in use today. Some non-invasive covert methods will also be discussed.

Day 2 we will teach you how to use the design flaws in mechanical combination locks to manipulate the wheels and components to obtain a locks combination while opening the locking mechanism. All mechanical locks have factory defects, known as tolerances, which allows them to be manipulated.

This is a non-invasive method for obtaining access to a safe as well as retrieve the combination.
